FOREWORD

In considerable measure this work is a by-product of an extensive study of the electoral process in the South conducted by the Bureau of Public Administration at the University of Alabama between 1946 and 1949. That study was conceived and promoted by Roscoe C. Martin, then director of the Bureau, financed by a grant from the Rockefeller Foundation, and directed by V. O. Key, Jr. Its chief results were published as Southern Politics (Alfred A. Knopf, 1949), under the authorship of Mr. Key.

Mr. Heard, Mr. Strong, and I were closely associated with that study. We were impressed by the fact that the most elementary data for the study of political behavior -- detailed election and primary returns -- were not available in most cases. We desired to make available in a usable form the statistics that had been gathered after much time and labor, and to make them complete. We were encouraged in the undertaking by the interest that has been shown by Professor E. E. Schattschneider, chairman of the Committee on National Political Parties and Elections of the American Political Science Association, in the problem of more adequate preservation and distribution of political statistics.

The Research Committee of the University of Alabama granted funds to complete the collection of the data and to put them into a form satisfactory for publication. Without this help from the Committee, the job could not have been done.

We gratefully acknowledge the assistance of Miss Mary Helen Crawley and Mrs. Katherine Wade Thompson, research assistants in the Southern Politics project, who did much of the work of collecting and transcribing the figures during the period of that study, and of Mrs. Ann Dorsey, Mrs. Frances Gray, and Mr. Joseph M. Robertson, who have worked with us more recently in completing the collection. Much of the actual transcription of the data from the official returns has been done by individuals in the various southern states, so numerous their names cannot be listed. Their help has been greatly appreciated.

York Willbern

Proposed poll tax repeal, 1949 206
Election of governor, 1949 206

For several months following the 1948 election your editors tried to obtain the county-by-county presidential returns for Georgia. We were unable to do so. From several sources the explanation was given: The returns had been mislaid in the governor's office where they were canvassed and despite diligent search could not be found.

The incident points to the distressful condition of American political statistics, a condition that has aroused increasing attention in recent years. There have been numerous pleas for the systematic collection, preservation, and dissemination of election returns for all levels of government. To many, including ourselves, the Bureau of the Census is the logical agency to perform this necessary, nationwide, public service. Until national action is taken, however, we feel it important that returns for limited areas be made available in a form usable by students of politics. Such is the purpose of this volume. It is offered as an encouragement to social scientists, journalists, politicians, and to anyone else who would study the South and its politics.

We think it appropriate in presenting a volume of this kind to make certain comments that establish the need for the book. We feel, too, that persons who study politics should know -- if they don't already from painful experience -- something about the state of southern election statistics. We have therefore written a word on the availability of election returns in the South.

Secondly, we explain below why this book contains the data -- and only the data -- you find in it. The reasons for including some of the contests and the other tabulations will lend greater meaning to their use.

In a third section we suggest some of the ways this information can be used by a layman who lacks statistical training and who has no corps of helpers to do his figuring for him.

The tables for each state are grouped together in chapters. Each chapter carries a set of head notes that explain unusual features of the tables and give the sources of the data.

1. A Word About Southern Election Statistics

The incentive to bring forth this volume arose from our own experiences in southern political research. We were associated with V. O. Key, Jr., at the Bureau of Public Administration of the University of Alabama, in the preparation of Southern Politics (Alfred A. Knopf, 1949). The difficulties of obtaining the statistical data essential for that study impressed us, and the officials of the Bureau, with the usefulness of making the data available to others. In the foreword Mr. Willbern has expressed appreciation to the University of Alabama Research Committee for a grant that permitted the collection of additional returns after Southern Politics was completed.

We are concerned with the eleven American states most consistently Democratic in the election of public officials. They are, not by coincidence, the former Confederate states: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia.

The Southern Politics staff set out to gather county-by-county returns for these states. They sought particularly general elections and Democratic primaries for governor and United States senator since 1920. After two years of effort and considerable expense, the results of roughly three-fourths of the primaries and of less than half the general elections had been obtained. Special exertions secured the figures indispensable for the study. It is significant, however, that some two-fifths of the returns for the two most important elective offices in the South were not available to a large, independently financed research project. To get the votes for lesser offices, constitutional amendments, referenda, and races prior to 1920 proved even more difficult.

The publication of election results varies greatly from state to state. Nine of the eleven southern states publish general election results in one form or another. In Georgia and Alabama they appear in the quadrennial official and statistical register of the respective departments of archives and history. In Florida, Mississippi, North Carolina, Tennessee, and Virginia they appear in biennial publications of the secretary of state (and sometimes in separate pamphlets issued by the secretary or by the state board of elections). In South Carolina and Louisiana the secretary of state issues separate pamphlets as supplements to his biennial reports. In Texas, the Texas Almanac (published by the Dallas Morning News) prints the state totals but rarely the county figures. There is no publication of general election results in Arkansas.

Democratic primary returns are published along with those of the general elections in Alabama, Georgia, Mississippi, North Carolina, Tennessee, and Virginia. In Florida and Louisiana the secretary of state issues separate pamphlets for each primary. The Texas Almanac carries county-by-county results of the important Texas primaries. In South Carolina the returns have not been published regularly, although recently the Democratic state committee printed a booklet covering the years 1930-46. In Arkansas no returns at all are published.

Yet it profits the researcher little that most returns have been printed in one place or another at one time or another. Few libraries collect state documents of more than one or two states. Many of the state reports go out of print quickly. Many of the reports appear long after the election. While some secretaries of state gladly supply available returns -- often free, sometimes for fee -- others have the unhappy habit of not answering mail that originates outside their constituencies. Suffice it to say that after the staff of Southern Politics had done as much business as possible by mail, it was necessary to have a representative call in seven of the eleven states to procure back copies of published returns and in eight of them to copy figures.

Be it noted that the chore was not without its lighter moments. One of our colleagues spent two days in one state copying returns. He was given access to the records by a clerk, but when the secretary of state learned what was going on he summoned the professor to his office. The secretary wanted to be sure he was not a "communist" and questioned him closely before letting him continue to examine the public records.

In a few states, party officials keep the returns of the primaries. Usually party posts in the South are not important, and party officials need give only scant attention to their duties. We found party officials generally less equipped and less inclined than public officials to supply election data.

We encountered instances where returns had not been kept either in party or government archives. The newspapers offered the last resort; but most papers, lacking the sense of historical record of the New York Times, report incomplete returns until the outcome of the race is assured and never get around to printing the final, official tabulation.

Our experience with these conditions led to this volume. Now a word of explanation about its contents.

2. A Word on What This Book Contains

This book presents the returns of Democratic primaries and general elections for governor and United States senator between 1920 and 1949. Virtually all of the significant competitive politics of the South takes place in the Democratic primaries -- or, simply, the "primaries," as we call them throughout. We have included returns of both the first and second primaries. All of the southern states except Tennessee and Virginia now hold a second primary or "runoff." If no candidate receives a majority of the votes cast in the first primary, a second race is held between the two leading contenders. In Tennessee and Virginia a simple plurality nominates.

The general elections in most states attract fewer voters than the primaries, and in all of the states they are traditionally won by Democratic candidates. The general election results are nevertheless essential to a study of the one-party system and to an appraisal of its prospects for survival. We have therefore included them. The outcome of some of the races, however, has been so lopsided as to make the race virtually uncontested. It seemed pointless to include a county-by-county report of such votes and in those instances the state totals alone have been given. In a few other instances we have had to report incomplete returns. Those and other exceptions to our general scheme are noted in the head notes for each state.

The difficulty of obtaining returns varies inversely with the importance of the office. The published returns, and those available from a central source like the secretary of state, only occasionally include the lesser races. That fact, together with limitations of space, explains our omission of races for United States representative and lesser offices.

In numerous tables we have included the percentage of the vote received in each county by some of the candidates. We did not have the facilities to compute the percentages for all candidates in all races. We have merely reported the bulk of the percentages computed for use in Southern Politics. They include most of the important races, but students will doubtless find it necessary to make additional computations for their own purposes.

A word of caution in using the figures in this book -- or any election figures, for that matter -- is in order. We have transcribed the official returns. Many official returns contain errors. Frequently the state total of a candidate does not equal the sum of his county totals. Sometimes the published returns in the secretary of state's biennial

report do not agree with those given as final and official in the newspapers. The errors are generally more annoying than important, but they exasperate the conscientious researcher. We have made no attempt to "correct" known inaccuracies. You can't be sure where the error lies. A candidate's state total may be added incorrectly, or a misprint of one of his county figures may account for the discrepancy. Running the error back to first sources may confuse rather than clarify. Consider the case of the official returns of the 1943 first primary for governor of one particular state, which are filed in the office of the secretary of state. A comparison of them with the returns published by the secretary in his Blue Book revealed twenty-nine inconsistencies!

Aside from the returns for governor and senator, others of special interest in the study of southern politics have, incidentally, been included. Special comments about some of them appear in the head notes to each state. The detailed vote for the 1948 presidential election has been included because in no other place has the vote for the States' Rights candidate been reported separately. The presidential results prior to 1948 are available in the excellent volumes of E. E. Robinson, The Presidential Vote, 1896-1932 and They Voted For Roosevelt, both published by the Stanford University Press in 1934 and 1947 respectively.

We have included a number of state races in which Populist candidates appeared. No political development in the South since 1865 has excelled in importance the Populist movement of the 1890's. A poor agricultural region suffering with the early pains of industrialization, the South was enveloped by the great agrarian protest that swept the nation. Poor whites challenged the hegemony of "Bourbon Democracy" and, linked with Republicans, sometimes threatened one-party rule. The Negro, whose effective disfranchisement had been proceeding apace since Reconstruction, came into play, his votes bid for by both sides. The result was a traumatic experience in the development of the southern political personality. The consequences are with us yet. In many cases the lines of division between voters paralleled the earlier splits over secession and the later splits over Smith and Truman. In many areas the Populist elections revealed the fundamental economic cleavages that set the lines of social conflict and political purpose. Because of the overwhelming importance of the Populist period to the understanding of the South, we have included races in which Populism was at issue. The coverage is not complete, but to make it so would have called for resources beyond our command. The Populist races here brought together, however, will prove of deep interest to students of southern politics.

We have also included the returns of several referenda affecting the suffrage. Next to its one-party system, a low level of voter participation marks off the South most sharply from the rest of the country. The legal and constitutional disfranchising devices directed primarily at the Negro during and following the Populist period account in part for this condition. In later years certain states have shed themselves of suffrage limitations, particularly the poll tax. Who should be permitted to vote is a continuing issue that has often deeply divided the electorate, hence our inclusion of these votes.

Only three states in the South collect statistics that reveal the number of qualified voters. Louisiana and Florida publish statewide registration figures, each county being listed separately. Louisiana has for several decades listed, in one table, the number of members of each party and, in another table, the number of registrants by race. Thus, one can learn the number of Republicans and of Negroes but not the number of Negro Republicans. Florida, which began publishing registration data only recently, shows party affiliation by race. We have included these figures for several years. We have also included poll tax payments in Arkansas for a series of years. Arkansas has no registration system and the payments, as explained in the Arkansas head notes, reflect the number of qualified voters.

Few Republican primaries are held in the South. We have included all the returns we could locate. The county votes are useful in detecting points of greatest Republican strength and weakness and in analyzing internal party factionalism. A comparison of Republican primaries with Republican voting in general elections tells much about the party.

Several statewide prohibition referenda are also given. In some of the states, analysis of Democratic primaries over a period of years has turned up an apparent political sectionalism. Such is the tendency of Mississippi to divide between its hills and its delta. Moreover, this sectionalism has been found to coincide more or less closely with attitudes toward prohibition. The hill section inclines to vote dry while its traditional rival, the delta, inclines to vote wet. These facts suggest -- as did the 1928 presidential election -- that prohibition votes reflect social attitudes of political significance. For that reason we have included several of them.

3. A Word On Using Political Statistics

We hope in this book to encourage students and would-be-students of politics to employ

statistics in the study of local, state, and regional problems. For that reason we have made the book. We are aware, however, that lack of acquaintanceship with quantitative methods (even among some experienced political scientists) may limit its usefulness. Quantitative methods of studying political behavior have been well publicized. The more elaborate, highly refined procedures, however, take statistical training and abundance of staff usually beyond the reach of individual students of politics. We decided, therefore, to describe a few simple statistical techniques usable by the layman. Numerous books on statistical method are available. A few are mentioned in the bibliographical note at the end of this introduction. Most political scientists must find their way to them sooner or later. We do not offer what we say as a substitute. Rather, we want to open the first few doors of statistical method to those who have had no statistical training and whose circumstances of work do not permit the laborious computations and correlations that characterize advanced statistical analysis. The methods we describe can be managed by any individual with access to a calculating machine.

In describing ways to handle the figures we shall illustrate some of the questions that can be answered by them.

INTERCENSUS ESTIMATES

Let us look at the matter of voter participation. You wish to compare the voting level of a southern state with that in a state outside the region; or you want to learn whether voter participation is rising in a certain area. You need the percentage of the potential electorate that votes at certain times and places. When you divide the potential electorate -- usually the number of citizens twenty-one years old and over -- of a given year into the number of people who voted in that year you get a measure of voter activity.

The number of adults in the population is readily available from the census for the last year of each decade. Difficulty arises, however, when you need the participation rate for any of the nine years during each decade when no census was taken. How does one figure the potential electorate for the years between the censuses, for the "intercensus" years? Intercensus estimates of assured accuracy cannot be obtained. Suitable working estimates, however, can be obtained if it is assumed that the rate of change from one census to the next is constant over the intervening decade. Simply divide the increase or decrease by ten. Figure the estimate for the intercensus year by adding or subtracting the resulting amount for each year between it and the last census. Consider state A, whose adult population was 2,000,000 in 1930 and 2,200,000 in 1940. The increase of 200,000 divided by ten gives the estimated increase of 20,000 adults each year. The working figure for 1934 would be 2,080,000. The same method can be used to compute intercensus estimates of many types of data that appear in the census. You must be on the watch, however, for conditions, such as migrations caused by war, that would make for an uneven rate of change over the ten year period.

What of years subsequent to the latest census? If working in 1949, what end point could you use to figure the estimated adult population of a state for 1948? You have 1940 but no 1950. First, the Bureau of the Census publishes estimates of various kinds from time to time in its Current Population Reports. The estimate you want may already have been made. In this case it so happens that the Census made special estimates of the potential electorate in each state before the 1948 election. But assume you are working with a census classification for which estimates are not made between censuses. For example, you might need an estimate of the number of white adults living on farms, in order to compare urban and rural voting behavior. You know the percentage of total adults who were white and lived on farms in 1940. You will have to assume the same percentage did so in 1948. If the percentage were 20 percent in 1940, you would arrive at the estimate for 1948 by computing 20 percent of the total adults estimated by the Census for 1948. The result would not be precise. Indeed, if much of a trend away from the farms to the cities had been under way it would be quite wrong. Yet it might be the best you could do with the data at hand.

QUARTILE RANKING

Having calculated the percentage of adults that voted in every county of a state, you might be struck by the differences from county to county -- high participation in some, low in others. On checking other election years you might find these differences to be fairly constant. You would want to know why; and to ask why is another way of asking what kinds of people vote most in the various counties.

You suspect that Negroes do not vote as much as whites. A quick examination reveals high participation in several counties with few Negroes and low participation in a number of counties with many Negroes. "Quartile ranking" offers one way to submit your hunch to a partial check. List the counties in the order of their voter participation, the highest first and the lowest last. Then for the same year, list the counties by the percentage of their population that was white. Divide both lists

into "quartiles," that is, into fourths. In a state with 100 counties, for example, the upper quartile of counties in voter participation would constitute the 25 counties with the highest level of voting. Note that many statisticians give the term quartile a more restricted and technical definition. We use it synonymously with quarter.

On comparing the two lists you may find that many counties appear in the first quartile on both lists, many appear in the second quartile on both lists, and so on. The results might be expressed verbally in some such manner as this: "Of the 25 counties with the highest percentage of adults voting in 1940, 22 of them were among the 25 counties of lowest Negro population. Of the 25 counties with the lowest adult participation, 21 of them were among the 25 counties with the highest Negro population. The implication is clear that fewer Negroes vote than whites."

QUARTILE MAPS

You may confirm the above implication by consulting suffrage requirements as they bear on Negroes and whites and by what you know of local practices. You conclude that Negroes vote little as compared with whites and you want to show that fact clearly and simply.

You can transfer the lower quartile of each of your lists to a map of the state that shows county boundaries. On one such "county outline map" crosshatch the counties with the lowest voter participation. On another, crosshatch the counties with the highest proportion of population Negro. The resulting pair of almost identical maps would dramatize effectively the fact of low Negro voting.

"Quartile maps" can be used as simple tools of analysis as well as to display the results of analysis. You want to find the centers of strength of a perennial candidate like Bilbo of Mississippi. Having at hand the percentage of the total vote he received in each county in a series of races, rank the counties in each race by the order of their preference for Bilbo. Then map each race, marking the counties where he ran strongest. Comparison of the maps will show whether he consistently found his greatest strength in the same counties and sections of the state. In the case of Bilbo, the maps would show something of a continuing pattern over a long period of years. To get a line on the meaning of that pattern the maps could be compared with maps that show economic, geographical, topographical, agricultural or other characteristics. Visual inspection would immediately reveal that Bilbo's sustained strength lay in the "hills," an area of poor soil, and his weak areas lay among the counties of rich soil in the eastern black belt and the delta.

FREQUENCY DISTRIBUTION TABLES

Closely related to the devices described above are measures of simple correlation. Imagine that you are trying to learn the kind of people who voted for a candidate. The candidate is a "rabble-rouser" who infuses his campaign language with the rural idiom. Is he really more attractive to rural voters than to city folks?

The hypothesis can be tested by a "frequency distribution table" like the following:

Number of Counties with a Given Percentage of						
Total Vote for Candidate, First Primary, 1940	Population Rural, 1940					
	100	80-99	60-79	40-59	20-39	0-19
Over 75	15					
60-75	11	10				1
50-59	9	5	4			
40-49			4			
25-39				2	12	5
Under 25					8	14

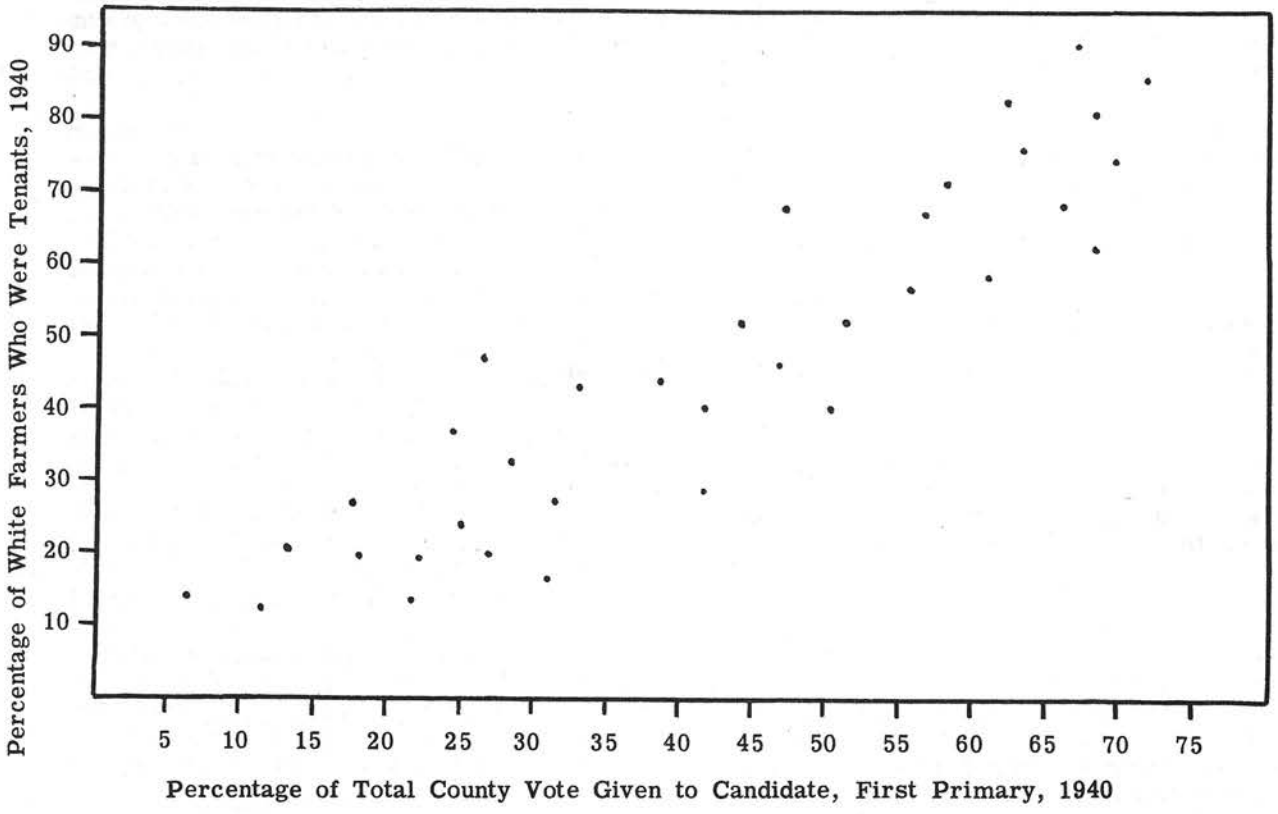
Using such a table avoids ranking the counties, a laborious task in states with large numbers of them. Make a grid like the above table. Your two lists of counties will probably be arranged alphabetically. One shows the percentage of each county's population that lived in rural areas in 1940. The other shows the percentage of the vote the candidate received in each county. Reading Alpha County, you find that it was 100 per cent rural and gave the candidate 81 per cent of its vote. You put a vertical mark in the extreme upper left square of the grid. Beta County was 15 per cent rural and gave the candidate 24 per cent of its votes. You put a mark in the extreme lower right square. After running through the 100 counties in this way you add up the marks in each square and have the above table. From the table you learn that the candidate did indeed find his greatest support in rural areas and made his weakest showing in urban areas.

Your eye is attracted, however, by the county that appears as an exception to the general pattern, the one in the upper right hand part of the table. On checking, you may find that you have misread a figure and the mark should have been placed in another square -- many statistical aberrations turn out to be errors. In this case, you find that your candidate, though he lives on a farm, hails from a county containing a large city. Because of his local connections he has run better in that city than in others of comparable size throughout the state.

SCATTER DIAGRAMS

In further analyzing the candidate's strength you will observe that there were thirty-five wholly rural counties and in all of them he received more than half the votes. You wonder what kinds of rural voters he appealed to most. The "scatter diagram" provides a way to get at the problem.

A scatter diagram is a graphic form of the frequency distribution table. You may have reason to believe that tenant farmers gave the candidate more support than did other farmers. Mark off a piece of graph paper like the illustration below. Along the bottom margin mark the scale of one of the variables, in this case the percentage of the county vote received. Along the left hand margin mark the scale of the other variable, in this case the percentage of white farmers who were tenants. Then, in the same manner as you made the frequency table, put a dot on the graph for each county. Put the dot at the point where a vertical line representing the percentage of the vote it gave the candidate intersects with a horizontal line representing the percentage of the white farmers in the county who were tenants. Do so for every county. When finished you may have a pattern that looks like this one:



If your result is like this, you are said to have a fairly high "positive correlation." As the percentage of white farmers who are tenants goes up from county to county, the strength of the candidate also rises. If the dots formed a single line ramrod straight, you would have a "perfect" correlation, meaning that one of the factors varies in exact proportion to the other. If the trend of the dots were downward and to the right, the correlation would be called "negative." The rise of tenancy among white farmers caused the candidate's vote to fall rather than to rise.

It is essential to recognize that the presence of a correlation does not in itself establish a cause-and-effect relationship between variables. The sales of ice cream rise during summer months, as does attendance at the public beaches, but one does not cause the other. In this instance, they are both caused by a third factor, hot weather and hence are related, though not as cause and effect. The analyst must understand the context in which his variables operate and perceive the character of the relationship between them. Only then can he with assurance infer causal relationships from frequency tables and scatter diagrams.

Scatter diagrams prove particularly helpful in studying political machines. The Byrd organization puts up candidates for several offices in Virginia. The observer may wonder in the subsequent canvass whether the organization has elected the candidates or the candidates have attracted their own votes and elected the organization. If each candidate drew his strength from sources different from his running mates, it would appear that each of the candidates accounted for his own victory. On the other hand, if all of the candidates ran close together in all parts of the state, being of roughly equal strength everywhere, it would be clear that the voters who supported them possessed a common allegiance, probably the organization. Scatter diagrams correlating the votes of the candidates would reveal the relationship. You might conclude that the organization does, indeed, have a cohesive statewide following that it can "deliver" to any candidates it backs. By plotting scatter diagrams relating the votes of organization candidates in elections several years apart you could get a line on the continuity of the organization's strength.

MULTIPLE VARIABLES

The statistical hand tools we have been describing do not pretend to handle complicated problems involving many variables, yet it is possible to use them successfully on a limited scale to deal with more than one variable.

Let us go back to the problem of voter participation. We agreed that, in the hypothetical state we were examining, Negroes for the most part did not vote. The percentage of the population that is Negro thereby became one significant variable. Yet other factors affect voter participation. Studies of other parts of the United States have found participation lower in cities than in rural areas. You want to test this proposition. Obviously you will learn nothing by taking all the counties of the state containing sizeable cities and comparing their levels of voter participation with those of all the rural counties. The differences in Negro population would render the result meaningless. You must take a set of counties with approximately equal proportions of Negroes in the population and compare the urban counties among them with the rural counties among them. The number of counties involved would determine which of the correlational techniques described above would be most convenient.

In isolating factors of this kind you will find it useful to test over as wide a range of variation as possible. For example, you have thirty counties of similar Negro population. At one end of the range of variation are five counties containing large cities. At the other end are ten counties completely rural. The fifteen counties in between have smaller cities of different sizes. If the presence of cities has any effect on voter participation you will be able to detect it most readily by comparing the counties at the opposite ends of the range of variation. This device of "maximizing the variables" proves helpful in all correlational analysis.

You may find that a noticeably larger percentage of potential voters go to the polls in wholly rural counties than in counties with large cities; but you observe, too, that there are disparities among the rural counties. A suspicion has lingered all along that the influential factor may not be the presence or absence of a city, but, rather, the size of the population of the county -- the number of voters to whom candidates must appeal. You could inspect the ten wholly rural counties to learn whether higher levels of voting prevail in the less populous than in the more populous ones. If you found this to be the case, you would want to test this hypothesis in other states. Your findings might be confirmed, or you might discover departures from your expectations. In casting about for possible explanations you might find that in a second state there are tight local machines in some counties that exert themselves to get out the vote. If there were enough such "machine counties" you could then measure the influence of the machines on voter turnout. In this way you would ultimately single out the factors that determine the level of voting.

In this discussion we have suggested only a few of the political problems that can be tackled by simple statistical means. The ingenious researcher faced with concrete questions will vary and combine his procedures in many ways. The better he understands his subject matter the better he will understand the limitations and opportunities of methods like these.

BIBLIOGRAPHICAL NOTE

The next step for those who have mastered the simple procedures described above is an elementary text in statistics. Among the several good ones available are:

L. L. Thurstone, The Fundamentals of Statistics (Macmillan, 1935)

Frederick E. Croxton and Dudley J. Cowden, Applied General Statistics (Prentice-Hall, 1946)

Margaret Jarman Hagood, Statistics for Sociologists (Henry Holt, 1941)

Your editors believe that future progress in the analysis of political behavior will come in part from the application of quantitative methods. For students interested in becoming more familiar with some of the valuable work already done, we suggest, at random:

Stuart A. Rice, Quantitative Methods in Politics (A. A. Knopf, 1928)

Harold F. Gosnell, Machine Politics: Chicago Model (University of Chicago Press, 1937)

----------, Grass Roots Politics (American Council on Public Affairs, 1942)

James K. Pollock, The Direct Primary in Michigan, 1909-1935, (University of Michigan Press, 1943)

James K. Pollock and S. J. Eldersveld, Michigan Politics in Transition, (University of Michigan Press, 1942)

Louis H. Bean, Ballot Behavior: A Study of Presidential Elections (American Council on Public Affairs, 1940)

----------, How To Predict Elections (A. A. Knopf, 1948)

We are encouraged that we are not alone in believing there is need to collect election returns. Professor Schattschneider has described political statistics as one of our "areas of ignorance." For a discussion of the American problem in general see his The Struggle For Party Government (College Park: University of Maryland, 1948), chap. II; see also Earl Latham, "Political Statistics," The Journal of Politics, 10(1948),pp. 636-58.

Although we join our voices with these writers and urge the more complete collection and preservation of election returns, we invite attention to the valuable compilations already in print. The two volumes by E. E. Robinson containing presidential returns have been mentioned earlier. In 1946 the Bureau of the Census issued Vote Cast In Presidential and Congressional Elections, 1928-1944, in which returns are given by counties. For many years the Congressional Directory has carried the major party vote for senators, by states, and for representatives, by districts. The Municipal Reference Service of the Census has been collecting state documents containing primary and general election returns since about 1938. "Elections Data in State Documents," appearing in the Bureau's State Documents (Washington, D. C., October, 1944), lists the offices for which returns are published, the areas by which they are reported (by county, by district, etc.) and the documents in which they appear. Information on sources of the number of registered voters and a bibliography of state election law compilations and citations are also included.

The results of the governor's elections of 1892 and 1894 are included in the tables together with the votes ratifying the Constitution of 1901 and the "Boswell Amendment" of 1946.

A strong Populist candidate appeared in both of the governor's races.

The Constitution of 1901 is Alabama's "disfranchising constitution."

The "Boswell Amendment," named after its chief sponsor, was designed to offset the constitutional attack on the white primary. It limited the electorate to those persons who could "understand and explain" any article of the United States Constitution and who were of "good character" and understood "the duties and obligations of citizenship under a republican form of government." Discretion in judging qualifications under the amendment lay with local boards of registrars. It was invalidated early in 1949 by a three-judge Federal District Court and the Supreme Court rejected a petition to review the case. The vote on the amendment displays a division frequent in Alabama politics between the black belt and the rest of the state.

A system of preferential voting prevailed in Alabama's primaries until 1931. Each voter expressed a first and a second choice. If no candidate received a majority of the first choices, all but the two leaders were eliminated. All second choices expressed for the two leaders were then added to their first choice totals, the candidate with the highest combined total winning.

In the general election of 1930 two prominent Democrats opposed the Democrat nominees. J. Thomas Heflin, running for senator, and Hugh A. Locke, running for governor, had been excluded from the Democratic primary because of their support of Hoover in 1928.

UNOPPOSED CANDIDATES:

J. Thomas Heflin, primary for senator, 1924

Lister Hill, special election of senator, April 26, 1938

Lister Hill, regular primary for senator, May 3, 1938

John H. Bankhead, primary and election for senator, 1942

John Sparkman, special election of senator, 1946

Special tables presented include the vote on a state constitutional amendment to repeal the poll tax in 1938 and the vote ratifying a "right-to-work" amendment in 1944. Also presented are poll tax payments for 1928 through 1948.

The "right-to-work" or open-shop amendment was similar to others debated and adopted in southern states in recent years. In Arkansas it was backed vigorously by an organized group of delta planters and Little Rock businessmen. It was a storm center of state politics prior to its ratification. The vote offers a clue to the location of "conservative" and "liberal" attitudes in the state.

Arkansas' poll tax statistics are more useful for analysis than those of other southern states. The state has no registration system, the tax ($1.00 per year) is noncumulative, and there are no exemptions from liability because of age. Consequently, it is easier to get at the number of qualified voters than in states with more complicated poll tax provisions and suffrage requirements.

Note that all but the last two columns carry a heading such as "1932 issued 1933." The first figure is the year of "assessment." Formerly, poll taxes were assessed between the first Monday in January and April 10; payment was due the following year between the first Monday of January and the Saturday next preceding the first Monday in July. Such payment entitled a person to vote during the last six months of the second year, a period including both the primaries and the general election. Tax payments fell off sharply in years of no election. In 1939 the legislature changed the period of collection to run from the third Monday in February to October 1. Since then payment has entitled a person to vote for twelve months beginning October 1, after payment. A person therefore has to pay the tax every year to vote in all primaries and elections. In 1947 the legislature abolished the assessment procedure and made the tax payable any time throughout the year preceding each October 1st deadline. The tax is now designated by the year in which the deadline for its payment falls.

The candidacy of J. H. Blount, "Negro Independent," for governor in 1920 grew out of a struggle within the Republican party between lily-white and black-and-tan elements. Similar splits in Republican ranks appeared in other states.

The primaries for governor, 1920 and 1922, and the primaries for senator, 1920 and 1930, do not come from a single source. They were pieced together from newspaper reports, chiefly those in the Arkansas Gazette (Little Rock), extending over a period of many days. To show the degree of completeness, the number of precincts reporting is recorded. The totals of the 1922 primary for governor, taken from The Democrat (Little Rock), are official and complete.

In the returns of the 1932 primary for governor the figures for Sebastian County appear out of line with other counties. The figures are given, nevertheless, as they appear on the official tally sheets.

The official returns of the 1937 special election for senator are mutilated at the top of the page where Arkansas County appears. The figures for that county reported here were obtained from the Arkansas Gazette. They are complete from 19 of 23 precincts.

No primary preceded this election. Carl Bailey was named the Democratic nominee by the state committee of the party. Heated controversy arose from the action, and he was defeated by John E. Miller, a veteran Democratic member of Congress who ran as an Independent.

UNOPPOSED CANDIDATES:

Homer M. Adkins, election of governor, 1942
Joseph T. Robinson, primary for senator, 1924
T. H. Caraway, primary for senator, 1926
Joseph T. Robinson, election of senator, 1930
John L. McClellan, election of senator, 1942
John L. McClellan, primary for senator, 1948

RETURNS OMITTED:

Primary for governor, 1932 -- In addition to the seven leading candidates, five other candidates polled 5,118 votes out of the grand total of 281,971

SOURCES:

All elections, and primaries since 1922 -- generally found on file in the office of the Secretary of State. They are published by no private or public agency.
Primaries for governor, 1920 and 1922, and primaries for senator, 1920 and 1930 -- from newspapers, chiefly the Arkansas Gazette (see above)
First primary for governor and election for president, 1948 -- provided in mimeographed form by the Secretary of State
Second primary for governor, 1948 -- Arkansas Gazette, August 17, 1948
Poll tax payments -- provided by the State Comptroller's Office, except 1947, from The Democrat (Little Rock), October 14, 1947

PRIMARY FOR GOVERNOR
August 10, 1920

Three Republican primaries and the number of qualified voters for 1946 and 1948 are included.

Florida is one of the few southern states in which statewide Republican primaries have been held.

Florida and Louisiana are the only southern states whose statewide registration data show the number of Negroes qualified to vote. Florida goes a step farther and breaks down party affiliation by race.

Though Florida repealed its poll tax in 1937, the move was accomplished by legislative action and no popular vote was required.

The following counties were created during the period covered by the tables: in 1921, Charlotte, Dixie, Glades, Hardee, Highlands, Sarasota, and Union; in 1923, Collier and Hendry; in 1925, Gilchrist, Gulf, Indian River, and Martin.

Preferential voting prevailed in Florida's primaries through 1928. The Florida system differed slightly from the Alabama system. In Florida, each voter expressed a first and a second choice. If no candidate received a majority of first choices, all candidates but the two highest were eliminated. The second choices expressed for the two highest on the ballots of eliminated candidates were added to the first choice totals, the candidate with the highest combined total winning.

Thus, in the 1920 primary for governor, candidate Hulley was eliminated. The votes shown for him are the first choices he received. The second-choice votes listed for Hardee and Swearingen are the second choices of voters whose first choice was Hulley. Apparently many voters did not indicate a second choice. In the 1924 and 1928 primaries three candidates were eliminated. The second choices from each of these three going to one of the two surviving candidates are listed next to the first choices of those candidates.

The appearance of two Republican slates in the general election of 1920 reveals a clash over the role of the Negro in the party. "Rep. W." refers to a candidate of the lily-white faction.

UNOPPOSED CANDIDATES:

Spessard L. Holland, election of governor, 1940

Duncan U. Fletcher, primary and election of senator, 1932

Park Trammel, election of senator, 1934

Claude Pepper, special primary and special election of senator, 1936 (one of two Senate seats to be filled at the same special primary and special election)

Charles O. Andrews, election of senator, 1940

SOURCES:

Elections, primaries before 1932, and registration figures -- the biennial Report Of The Secretary of State

Primaries, 1932 and after, including Republican primaries -- Florida Primary Elections (pamphlet published by the Secretary of State after each statewide primary)

Special primary for senator, August 11, 1936 -- provided in mimeographed form by the Secretary of State

* Incomplete or Approximate

Among the returns are included the election of governor, 1894, and the vote ratifying the 1908 "disfranchising amendments" to the state constitution.

A strong Populist candidate appeared in the gubernatorial race.

Prior to 1942, Georgia governors were elected for two-year terms instead of the present four-year term. The special election of 1948 was held to fill a vacancy.

The following counties were created during the period covered by the tables: in 1920 -- Brantley, Lamar, Lanier, Long, and Seminole; in 1924, Peach. On January 1, 1932, Campbell and Milton counties were merged with Fulton.

Georgia primaries for governor and for senator are governed by the "county-unit system." The eight most populous counties are awarded six unit votes each; the next 30, four each; the remaining 121 counties, two each. The candidate with a plurality of a county's popular votes receives all its unit votes. A majority of the 410 unit votes is required for nomination. The unit-vote count, as well as the popular count, is shown for the gubernatorial primary of 1946. In that year the candidate with a plurality of the state's popular votes failed to win a majority of the unit votes.

The second primary for governor, 1920, is unofficial and incomplete. Only newspaper returns were available. Eleven counties then in existence were not reported; a twelfth, Towns, held no election. Returns from the reporting counties are described by the paper as "complete unofficial returns."

UNOPPOSED CANDIDATES:

Democratic nominee, elections of governor, 1920 through 1934

Clifford M. Walker, primary for governor, 1924

Democratic nominee, elections of senator, 1922, 1924, 1926, 1930, and 1936

Walter F. George, primary for senator, 1932

Richard B. Russell, Jr., special election of senator, 1932

Richard B. Russell, Jr., primary for senator, 1948

RACES OMITTED:

The 1948 presidential returns are not included. Since being canvassed and certified in the office of the governor, they "have been mislaid . . . and, although diligent search has been made they have not come to light." County figures for Republican and Democratic parties, but not for the States Righters, are found in the World Almanac, 1949 edition, pp. 65-66. State totals are: Democratic, 254,646; Republican, 76,691; States Rights, 85,055; Progressive, 1,636; others, 762.

Elections for governor, 1936 through 1946 -- One or more independent candidates opposed the Democratic nominee in each race, none receiving as many as 2,000 votes. In 1940 Eugene Talmadge received the nomination of the "Grass Roots Democrats" as well as the regular Democrats. He received under each label, respectively, 22,305 and 267,574 votes.

Special election of governor, 1948 -- Morgan Blake, one of several independent or write-in candidates, received 8,017 write-in votes out of 363,764 cast. Results available but not included because of weakness of opposition.

Election of senator, 1920 -- Edwards, an independent, received 6,700 votes against Democrat Thomas E. Watson's 124,630. No county breakdowns available.

Elections of senator, 1938, 1942, and 1948 -- One or more independent candidates opposed the Democratic candidate in each race, none receiving as many as 3,500 votes.

SOURCES:

Primaries and elections through 1942 -- generally found in the Georgia Official and Statistical Register (published by the Department of Archives and History, at one time biennially but recently at less frequent intervals)

Election of governor, 1894 -- Report of the Comptroller General for the year ending September 30, 1895, p. 194a

Ratification of the "disfranchising amendments," 1908 -- Secretary of State's Report, 1908, pp. 52-56

First primary for governor, 1920 -- photostat of official returns provided by the Georgia State Library

Second primary for governor, 1920 -- The Constitution (Atlanta), October 8, 1920

Primary for governor, 1946 -- obtained from records in the office of the Secretary of State

Primary for governor, 1948 -- hectographed pamphlet issued by the State Democratic Executive Committee

Primary for senator, 1920 -- The Constitution, September 12, 1920

Primaries for senator, 1926 and 1944 -- obtained from records in the office of the Secretary of State

Included in this chapter are the election of governor in 1896, the vote on the 1934 constitutional amendment abolishing the poll tax, and the number of qualified voters for 1896 and 1948.

A strong Populist candidate appeared in the election of governor.

Louisiana, like Florida, publishes registration figures which show the number of Negroes qualified to vote. For comparative purposes, it may be noted that between 1936 and 1944 the number of Negro registrants ranged from 900 to 2000. In 1946 it was 7,561. Party affiliation is also shown, but unfortunately it is not broken down by race.

Louisiana used preferential voting for the last time in the senatorial primary of 1920. The system was similar to that found in Alabama and Florida. The table presented shows the second-choice ballots after they have been distributed.

The Louisiana "parish" is equivalent to the county in other states.

Louisiana primaries are the most fully reported elections in the South. The returns from each parish are broken down into voting districts.

UNOPPOSED CANDIDATES:

O. K. Allen, election of governor, 1932

Richard W. Leche, election of governor, 1936

Jimmie H. Davis, election of governor, 1944

Earl K. Long, election of governor, 1948

John H. Overton, primary for senator, 1938

Democratic nominee, elections of senator, all except 1938 and 1948

RACES OMITTED:

Election of governor, 1920 -- The Republican, J. Stewart Thompson, received 1,396 votes; the Democrat, John M. Parker, 53,792. Parish-by-parish figures unavailable.

Election of governor, 1940 -- The Republican, W. W. Tuttle, received 1,367 votes; the Democrat, Sam H. Jones, 225,841. Results available but not included because of weakness of opposition.

Election of senator, 1938 -- An independent candidate, Maurice Clark, received 250 votes; the Democrat, John H. Overton, 151,582. Results available but not included because of weakness of opposition.

The tables include the election of governor in 1895 and a prohibition referendum of 1934.

There was a strong Populist candidate in the gubernatorial race.

Prohibition sentiment in Mississippi follows significant political characteristics. The 1934 vote reveals the traditional division between the delta and the rest of the state.

George L. Sheldon, the Independent Republican candidate for governor in 1947, is not affiliated with the recognized Republican party. Since 1928 his lily-white faction has unsuccessfully sought recognition by the national convention. He is a former Republican governor of Nebraska. In 1948 the electors of both factions were pledged to Dewey and Warren.

No primaries preceded the special elections of senator in 1941 and 1947.

UNOPPOSED CANDIDATES:

Democratic nominee, elections of governor, all except 1947

Democratic nominee, elections of senator, all except 1922

B. P. Harrison, primary for senator, 1930

James O. Eastland, primary for senator, 1948

SOURCES:

All contests -- generally found in the Mississippi Bluebook -- Biennial Report of the Secretary of State

Election of governor, 1895 -- W. D. McCain, The Populist Party in Mississippi (unpublished master's thesis, University of Mississippi, 1931), pp. 66-8

Election of president, 1948 -- provided in printed form by the Secretary of State

	1948 PRESIDENTIAL ELECTION, con't.				
	States' Rights	Democratic	Independent Republicans	Republican	Pro-gressive
Wilkinson	809	43	15	6	1
Winston	1,928	240	17	16	4
Yalobusha	1,382	135	30	19	2
Yazoo	2,297	70	10	16	-

Special votes included are the elections of governor in 1892, 1896, and 1900, the ratification of the disfranchising amendment to the state constitution in 1900, the Republican primary for governor, 1940, and the Republican primaries for senator, 1930 and 1932.

There was a strong Populist candidate for governor in 1892 and 1896. A Republican was elected in the latter year. Democrats regained control in 1900.

The vote on the constitutional amendment adopted in 1920 abolishing the poll tax is not included. Two amendments were voted on at the same time. One amendment proposed to limit the rate of state and county property taxes and to authorize a state income tax. The other proposed to shorten residence requirements for voting and to abolish the poll tax as a voting prerequisite while leaving it as a source of revenue. The campaign turned on the proposed income tax; poll tax repeal was a secondary issue. The poll-tax-repeal vote therefore does not have its customary significance.

UNOPPOSED CANDIDATES:

O. Max Gardner, primary for governor, 1928

Furnifold M. Simmons, primary for senator, 1924

SOURCES:

All contests -- generally found in the North Carolina Manual (published biennially by the Secretary of State; published formerely by the North Carolina Historical Commission, and, in 1937 only, by the Legislative Reference Library)

Votes of 1892, 1896, and 1900 -- North Carolina Manual (1913), pp. 1005, 1006, which contains many valuable votes, including those on amendments submitted by the convention of 1835 and on calling a secession convention in 1861

All contests, 1944 - 1944 Official Vote (published by the State Board of Elections)

Primaries for governor, 1948 -- Official returns in The News and Observer (Raleigh), June 9 and July 8, 1948

Election of governor and president, 1948 -- Directory of State and County Officials of North Carolina, 1949 (issued by the Secretary of State)

Primary for senator, 1920 -- provided in typed form by the Secretary of State

Primary and election of senator, 1948 -- provided in mimeographed form by the State Board of Elections

The results of a liquor referendum held August 27, 1940, are included. The question put to the voters was: "Are you in favor of discontinuing the legal sale of intoxicating liquors, wines, beers, or other intoxicating beverages, and the imposition of new taxes to replace lost revenues as a result of repeal of present liquor laws?" To vote "yes" was to vote dry. The distribution of the votes shows up a sectional division between piedmont and lowlands that has off and on characterized South Carolina politics.

Prior to the 1926 election, South Carolina governors were chosen for two-year terms instead of the present four-year term.

The results of the first primary for governor and for senator, 1926, are unofficial and incomplete. The number of precincts reporting is therefore shown for both races. The official, complete statewide count, as certified by the State Democratic Executive Committee, was, for governor:

Ira C. Blackwood	34,870
John T. Duncan	6,297
Edmund B. Jackson	33,804
George K. Laney	13,386
John J. McMahan	2,300
Carroll D. Nance	16,970
D. A. G. Ouzts	10,570
Thomas H. Peeples	10,636
John G. Richards	44,806

for senator:

Edgar Brown	65,331
N. B. Dial	34,144
E. D. Smith	72,015

UNOPPOSED CANDIDATES:

Robert S. Cooper, primary for governor, 1920

Democratic nominee, elections of governor, all except 1938

Democratic nominee, elections of senator, 1920, 1924, 1926, 1930, 1941 and 1942

RACES OMITTED:

Election of governor, 1938 -- The Republican, J. A. Tolbert, received 283 votes; the Democrat, Burnet R. Maybank, 49,009. Results available but not included because of weakness of opposition.

Election of senator, 1932 -- The Republican, Harrigal, received 1,976 votes; the Democrat, E. D. Smith, 104,472. Results available but not included because of weakness of opposition.

Election of senator, 1936 -- The Republican, J. A. Tolbert, received 961 votes; the Independent Republican, Seabrook, 702; the Democrat, James F. Byrnes, 113,696. Results available but not included because of weakness of opposition.

Election of senator, 1938 -- The Republican, J. D. E. Meyer, received 508 votes; the Democrat, E. D. Smith, 45,351. Results available but not included because of weakness of opposition.

The Tennessee tables include the Republican primaries for governor, 1944, 1946, and 1948 and for senator, 1946 and 1948.

Tennessee and Virginia are the only southern states having no runoff primary. In Tennessee a runoff is provided for only in the event of a tie in the regular primary.

In contrast with the rest of the South, Tennessee statutes and party rules offer little inducement to party regularity. Independent candidacies are facilitated, and candidates bolt the results of primaries in which they have met defeat without fear of ruinous reprisals. The most notable cases occurred in 1932 and 1934. In both years Lewis Pope, anti-Crump candidate for governor, ran in the primary and the following election. The eccentric candidacies of John R. Neal in recent years would not be possible in states whose laws are designed to preserve the finality of the primary.

SOURCES:

All elections and primaries since 1926 -- generally found in the Tennessee Bluebook (published biennially by the Secretary of State)
Primaries for governor, 1920, 1922, 1924, 1926, and 1942, and primaries for senator, 1922, 1924, 1936, and 1942, and all Republican primaries, provided by the Secretary of State
Primary and election of governor, 1944 -- Official Returns, 1944 (pamphlet published by the Secretary of State)
All races, 1948 -- provided in mimeographed form by the Secretary of State

The vote on the 1902 amendment to the state constitution establishing the poll tax as a prerequisite for voting and the vote on an amendment in 1949 designed to repeal the poll tax are presented along with the 1944 presidential vote, a liquor election in 1935, and the Republican primaries for governor and senator in 1930 and 1934.

The presidential race is included to show in detail the vote for the Texas Regulars. E. E. Robinson's indispensable volume, They Voted for Roosevelt, does not list their vote separately but lumps it together with the Socialists and Prohibitionists under the category "other parties." The Texas Regulars represented a revolt of conservative Democrats against the economic policies of the New Deal. After failing to capture the Democratic party label, they ran a slate of independent electors pledged not to vote for Roosevelt. They constituted the first significant organized revolt of southern Democrats against the national party.

The Republican primaries are included despite the low participation and absence of contest. They are revealing of the nature of Texas Republicanism. The returns are considered complete and official by Republican state headquarters. The state headquarters reports that no primary was held in counties where returns are blank. Some of these are designated "no primary held." ("We could not get anyone to defray the expense of holding primaries in these counties.") The only other Republican primary held in Texas was that for governor in 1926. No county returns could be found. The state results: H. H. Haines, 11,215; E. P. Scott, 4,074.

The liquor election of 1935 amended the state constitution to permit the sale of hard liquor. Beer and wines were legalized two years earlier.

The following counties were created during the period covered by the tables: in 1921, Hockley and Kenedy; in 1924, Cochran; in 1927, Crane; in 1931, Loving.

In numerous instances no returns are shown for particular counties in the general elections. The reason is the failure of county judges to certify the returns of their respective counties to the Secretary of State prior to the legal deadline for making the official state tabulation fifteen days after the election. In the 1948 presidential and senatorial results presented here the returns of omitted counties have been filled in from another source, the "Texas Election Bureau." The Bureau is a transient arrangement among newspapers for obtaining speedy election returns. Results are obtained directly from county officials. Shortly after the 1948 election the Secretary of State issued the Bureau's tabulation in mimeographed form. It contains the returns of many counties not reported in the subsequent official tabulation. The insertions made in the two races from these returns are designated either "unofficial complete" or "unofficial incomplete." The state totals shown in the tables are the sums of the county figures. They differ from the official 1948 results, which are the totals only of the counties officially reported (not marked by one or two asterisks in our tables). The official 1948 returns are:

	President	Senator
Democratic	750,700	702,985
Republican	282,240	349,665
States Rights	106,909	

The presence of a black-and-tan Republican in the 1920 election of governor reveals the controversy within the party at that time over its relationship to Negroes.

The "American Party" of the early 1920's was the personal vehicle of James E. Ferguson. In 1920 he was its candidate for president and his close friend, T. H. McGregor, was its candidate for governor.

The 1941 special election of senator is the only instance in which a part of the available county returns have been omitted. In addition to the four major candidates, 23 others received votes totaling 4,550 of the 575,879 cast.

RACES OMITTED:

Primary for governor, first and second primaries for senator, 1922 -- Usable returns could not be located. Newspaper reports were hopelessly incomplete. The official state totals were:

Primary for governor:

Pat M. Neff	318,000
W. W. King	18,368
Fred S. Rogers	195,941
Harry T. Warner	57,617

First primary for senator:

Earle B. Mayfield	153,538
James E. Ferguson	127,071
Charles A. Culbertson	99,635
Robert Lee Henry	41,567
Charles Ousley	62,451
Cullen F. Thomas	88,026
Sterling P. Strong	1,085

Second primary for senator:

James E. Ferguson	228,701
Earle B. Mayfield	273,308

SOURCES:

Primaries since 1922 -- generally found in the Texas Almanac (published biennially by the Dallas Morning News)
Elections of governor, 1924, 1926, 1932, and 1944, special election of senator, 1941, and the election of president, 1944 -- Texas Almanac
Elections of senator, all except 1948, and elections of governor, all except above -- obtained from records in the office of the Secretary of State
First and second primaries for governor, 1920 -- complete, official returns from the Dallas Morning News
Primary for governor and first and second primaries for senator, 1948 -- provided in mimeographed form by the State Democratic Executive Committee
Election of president and of senator, 1948, and vote on amendment proposing repeal of poll tax, 1949, -- provided in mimeographed form by the Secretary of State
Republican primaries -- provided by Republican State Headquarters
Ratification of amendment establishing poll tax, 1902 -- complete, official returns from Dallas Morning News, December 21, 1902
Ratification of prohibition repeal, 1935 -- provided in manuscript form by the Secretary of State

The Virginia tables include a Republican primary for lieutenant governor, a prohibition vote, and the vote on an amendment to the state constitution designed to repeal the poll tax.

The Republican primary of 1949 was the first held in recent times. The only nomination contested was that of lieutenant governor. Although the total vote was extremely light, the race is included as of possible interest in studying Republican factionalism. The vote cast for the unopposed candidate for the gubernatorial nomination was 8,888.

An election was held October 3, 1933, to select delegates to a state convention to act on the proposed Twenty-first Amendment to the Federal Constitution. A vote "for ratification" was a vote for a delegate pledged to ratify the amendment, hence a wet vote.

The 1949 poll-tax-repeal amendment (called the "Campbell Amendment" after the chairman of the special Suffrage Commission that drafted it) produced a curious political spectacle. Over a period of several years various groups and individuals agitated for repeal of the poll tax. They were identified for the most part as opponents of the state organization of Senator Byrd. Finally, the organization-dominated legislature proposed an amendment to repeal the poll tax as a voting prerequisite. The amendment also, however, granted the legislature power to impose other suffrage requirements, including literacy tests and an annual registration, and to establish tighter state control over local registration boards. Anti-organization elements, long advocates of repeal, found the amendment unacceptable. These included the CIO-PAC, Negro organizations, and Francis Pickins Miller, the anti-organization candidate for governor in 1949.

Virginia and Tennessee are the only southern states having no runoff primary.

Virginia's "independent cities" are territorially and governmentally separate from the counties. The separate reporting of results is useful in studying urban voting behavior. Four such cities were created during the 1920-49 period. Separate returns are first reported for Martinsville in 1929, for Waynesboro in 1948, and for Colonial Heights and Falls Church in 1949.

Preceding the gubernatorial election of 1921, the Republican nominee, Henry W. Anderson, disclaimed the support of Negro voters. His attitude, and that of the Republican organization, provoked the candidacy of a Negro, John Mitchell, Jr., who ran as a "lily-black" Republican.

In the 1920 special election of senator, there were, in addition to the two major party candidates, twelve other candidates. Their total vote was 178. Republican candidate J. R. Pollard was a Negro.

Willis Robertson was nominated for senator in 1946 by a state Democratic convention.

UNOPPOSED CANDIDATES:

Carter Glass, nomination for senator, 1920, 1924, 1930, 1936, and 1942

Harry F. Byrd, nomination for senator, 1933, 1934, and 1940

RACES OMITTED:

Primary for senator, 1928 -- Claude Swanson won the nomination over seventeen other candidates who received a total of 628 votes

Election of senator, 1928 -- Independent and write-in candidates received a total of 623 votes; the Democrat, Claude Swanson, 275,425

SOURCES:

All contests -- generally available in printed or mimeographed pamphlets issued by the Secretary of the Commonwealth or, since its creation in 1946, by the State Board of Elections
Primary for governor, 1921, and primary for senator, 1922 -- Warrock-Richardson Almanac, 1924, pp. 58-59
Special election of senator, 1920, election of senator, 1922, and primary for senator, 1928 -- obtained from records in office of the State Board of Elections
